1) Write a program which creates two threads. one thread displaying "BMS College of Engineering" once every 10 second and another displaying "CSE" once every 2 sec.

```java
class Message implements Runnable {
    String message;
    int interval;
    public Message(String message, int interval)
    {
        this.message = message;
        this.interval = interval;
    }

    @override
    public void run() {
        try {
            while (true) {
                System.out.println(message);
                Thread.sleep(interval);
            }
        }
        catch (InterruptException e) {
            System.out.println("Thread Interrupted");
        }
    }
}

public class Lab8 {
    public static void main(String args[])
    {
        Thread thread1 = new Thread
                (new Message("BMS College of
                    Eng"));
        thread1.start();
```

Thread thread2 = new Thread (new Message
("CSE", 2000));
}
}

Output: BMS College of Engineering
CSE
CSE
CSE
CSE
BMS - - - - - - - -
